

2020 SkillsUSA State Championships Contest Update for Contestants

3D Visualization and Animation

February 19, 2020

Congratulations to you and your students in making it to this year's Georgia State Championship.

To best prepare your students for this year's competition, there are a few points below you should review and share with your competing team.

Contestant Must bring - Tool and Supply List

- Your own (working) computer there is no assistance for technical issues once the competition starts and LIMITED assistance prior to start.
- Power cables for your equipment
- surge protector, minimum 6-foot cord with enough outlets for all of your equipment
- Have all software licensed and capable of working off-line. If you are unsure of what this means, please refer to the software vendor's support page. Internet access once the competition has started is prohibited.
- Monitor(s).
- Technical manuals, notes, and text books.
- Writing instruments

SkillsUSA Contest will provide

- Power from the wall to your individual contest space

Contest notes

- We will be judging the competition from the student computers, so please know that you will need to leave the computer in the contest room until judging is complete
- You will need to write down any password that the judge will need to access your computer and your programs and contest
- You will need to write down your name and phone number, as well as your advisor's name and phone number, and your chair/ desk # so that the judges can contact you if they cannot access your contest. As well as if you don't return on time to pick up your equipment after the judging
- Power supply will be "daisy chained" on each aisle. For this reason, extension cords are highly discouraged. Make sure that your surge protector or power supply you bring has enough cord length to reach the power source. 6-foot recommended.
- **WIFI is NOT available in the contest area. "Hot Spots" are not allowed. Make sure that your system and software will function in this environment.**
